

P & T Consulting Limited

CERACTM
incorporated

CERAC has been manufacturing specialty inorganic materials since 1964 at its plant in Milwaukee, WI. Originally established to meet the needs of the research and development communities by producing smaller quantities of less common, known purity inorganics, today CERAC offers over 2000 stock items in quantities from 1 gram to several hundred kilograms. Our comprehensive product line includes metals, alloys, rare earth compounds, evaporation materials, sputtering targets, ceramic and cermet compounds and high purity materials.

We specialize in custom manufacturing, working with our customers to meet their exact specifications, then scaling up to production quantities as their projects require. Our unique integrated manufacturing capabilities enable us to control every step of the manufacturing process, from raw material procurement through chemical processing and final inspection, ensuring our customers a superior, high quality end product. We manufacture our own raw materials to exact specifications, then use them in other stock or made-to-order CERAC products.
